

COMPRESSED AIR ENERGY SAVING SOLUTIONS

GENERAL CATALOG

WISE Air 4.0[®]

MEASUREMENT SOLUTIONS:

- Compressor Master Controllers
- Smart Flow Sensors
- Dew Point Sensors
- Power Meters
- Real Time Smart Monitoring Software

Leaks Pro[™]
Professional Leakage Management Solutions

LEAKAGE MANAGEMENT SOLUTIONS

- Dynamic Noise Discrimination Leak Detectors
- Leakage Management Softwares
- Dual Seal Push Fit Connectors
- High Resistant Polyurethane Tubes
- Variable Air Flow Gun

Systel[®]

COMPRESSED AIR MANAGEMENT SERVICES

- Audits & Measurements
- Leak Detections & Repairs
- Air Quality Testing
- Compressed Air Training
- Project Management
- Performance Validations of Compressors, Dryers & Filtration Systems

Asia Regional Office

Systel Business Centre, #12 Sri Venkatalakshmi Nagar
Singanallur, Coimbatore - 641005, India
Tel. +91 - 422- 4395471/2 Email. info@systel.asia

Europe Regional Office

Pilestræde 58, 1112 Copenhagen
Denmark. Ph : +45 36990422

COMPRESSED AIR

A Gold Mine We Will Help You Dig

Being the fourth most important utility in numerous industries, how well you manage the consumption of compressed air can decide the fate of your business. This utility that makes several industries run happens to be among the costliest ones too. However, compressed air might not be as expensive as its mismanagement can make it. Many manufacturing industries around the world spend more than needed on compressed air only because they are using the inefficient equipment. On top of that, maintenance service providers can often deliver less desirable services that add to your costs in the long term.

This practice has become a trend and while most customers are knowledgeable about the use of compressed air and its equipment, they might not be aware of the certifying standards or minimum accepted performance level of various compressed air systems. Such lack of information tricks them into buying inefficient equipment and receiving service packages that only make matters worse. There had to be someone who would change things for customers and side with them. Hidhay did it.

Founder

Hiday is a compressed air specialist who has the in-depth knowledge of the compressed air industry. He founded the Systemel Group, and with his passion and dedication to the industry and his company, he has made it one of the best in Asia and Europe.

Experience of the Company

Founded in 2002, Systemel Group has been serving its customers for more than 17 years now. It all started in Coimbatore, India with a vision of bringing clarity, efficiency and improvement to the then conditions of the compressed air systems. During these years, the company has served a variety of industries from food processing and Iron & Steel to automotive and Textile. In short, we have made things better for our customers anywhere where compressed air serves crucially for their production and manufacturing processes.

We have also been proudly awarded ISO 9001-2008 for our quality process with UKAS Standards. Today, we serve Asia and Europe in the following regions and are expecting to be in more parts of the world with our group companies

- Systemel Technologies Europe ApS, Denmark
- Systemel Energy Solutions (India) Pvt. Ltd, India
- Systemel Engineering Controls, India

Leakage Management

Leakage Management Software

LeaksPro™ Mobile Application:

The LeaksPro™ system is the world's most used system for leakage management. The know-how and information based on almost 1500 fully documented projects from virtually all types of industry, benefits all LeaksPro™ clients. It puts you in a unique position to take full responsibility for the complete process, starting from the detection of leakages until they are repaired and the results fully verified.

Mobile based Documentation & Analysis

The LeaksPro™ system is mobile & web based. All documentation can be done on-site. The results and key reports are accessible to you immediately on site. You then have access to reports and key data that allow you to initiate the repair process immediately.

The LeaksPro™ system also have a number of functions that allow you to analyse causes and give you the key financials of the project and track development over time.

Logistics & Quality of Documentation

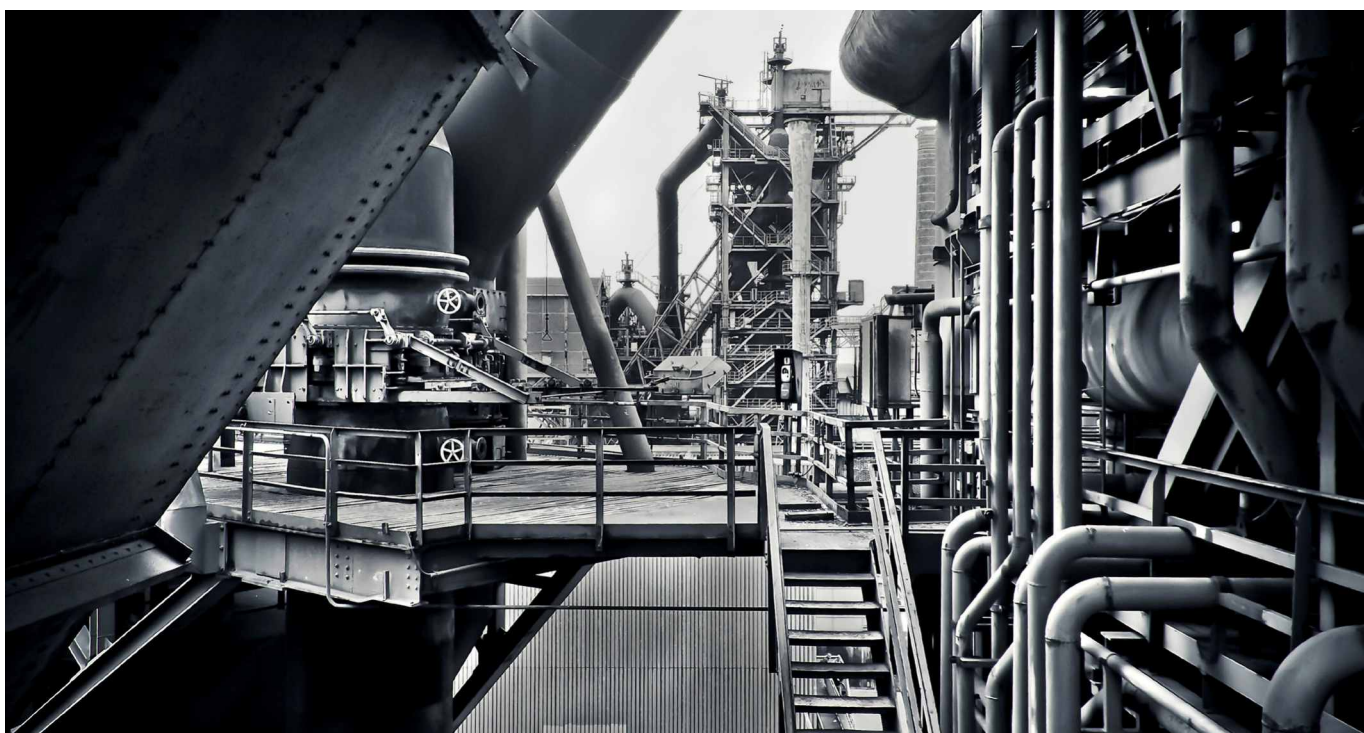

The LeaksPro™ process is essentially one of logistics. Every discovered leakage is associated with some form of action in order to get it repaired. For the process to work it requires great attention to detail. Documenting the exact brand, product codes for the parts that need replacing, noting location, repair times, priority leakages become essential information for the process to be efficient. With LeaksPro™ technicians will be highly trained and made familiar with all leading brands. The LeaksPro™ on-line system and our support have direct access to most manufacturers to further ensure accuracy in the information we provide.

Leakage Management

Leakage Management Software

Time is the key factor for success

Leakage management can provide you considerable energy savings in very short space of time. Most projects can in fact be paid for with what would be equivalent of one month's of leakages. Contact your closest LeaksPro™ partner and request a demonstration of the system and to provide you with a project calculation based on your compressed air consumption and production area.

Ordering Examples:

Order No.	Description
LPR 800	Professional Technical User License for Mobile Application
LPR 801	Professional User License for Report Access
TAG 901	Multi Colour Leakages Tags Kits (100 Nos in Each Colour)
Optional Accessories:	
LPR 802	Professional Sales User License
